hashirq1999@gmail.com

Islamabad, Pakistan

I am a versatile Software Engineer with a primary focus on app development and a passion for solving real-world problems through technology. While mobile development is my core strength, I don't confine myself to labels like "Frontend" or "Full stack." I fully embrace my role as a Software Engineer, someone who learns whatever is necessary, dives into any layer of the stack, and delivers solutions that make an impact.

I thrive on learning new tools, adapting to diverse challenges, and building scalable, user-centric applications.

With a strong foundation in both technical skills and product thinking, I bring curiosity, ownership, and flexibility to every project. I'm eager to grow within a dynamic engineering team where innovation, autonomy, and continuous improvement are part of the culture.

EDUCATION

Iqra University Islamabad Campus

BSc Software Engineering
2019 – 2023
CGPA 3.25

Edwardes College Peshawar

HSSC Pre Engineering
2017 – 2019

PROFESSIONAL EXPERIENCE

Software Engineer

ThunderBird Technologies | 09 / 2023- Present

- As a seasoned Software Engineer at our fast-paced startup, I lead a team of interns in developing a sophisticated, next-generation social media application inspired by platforms like Instagram, Facebook, and Snapchat named **Mistify**. I am responsible for overseeing the complete front-end architecture, blending innovative design with seamless user experience using technologies such as React Native, JavaScript, TypeScript, Kotlin, and Swift.
- In addition to my front-end expertise, I've engineered custom native camera modules in Swift (iOS) and Kotlin (Android), addressing key functional requirements and demonstrating a hands-on approach to solving complex technical challenges.
- Recently, I have expanded my skill set to the backend side of our application, gaining hands-on experience with Hasura, AWS S3, NestJS, Rest and GraphQL API's. This full-stack capability allows me to contribute across the entire development lifecycle—from crafting intuitive UIs to managing scalable backend infrastructure.
- Driven by curiosity and a commitment to excellence, I continuously seek out new technologies and methodologies to push the boundaries of what's possible in social media technology and deliver impactful results in dynamic startup environments.
- As a team lead, I also take pride in mentoring and guiding our interns, ensuring they gain hands-on experience while upholding high development standards.

SKILLS

- HTML5
- CSS3
- JavaScript
- TypeScript
- React
- NestJs
- React Native
- Xcode
- Android Studio
- Native Modules
- Git/Github
- Jira/Linear
- Hasura
- AWS S3 Bucket
- State Management
 - 1.Zustand
 - 2.Redux
- GraphQL/Rest APIs
- Firebase
 - 1.Cloud Messaging
 - 2.Authentication
 - 3.Analytics
- Google Cloud Console
- App Publishing
 - 1.Google Play Store
 - 2.App Store

TOP PROJECTS

Mistify

- ThunderBird Technologies Self Product
- Role:** Full Stack Senior Developer
- Tools:** React Native

Hospital Management System

- University Final Year Project
- Role:** Front End Developer
- Tools:** React Native, Redux, Tailwind
- Description:** Hospital Management system is an innovative IOS app designed to revolutionize the health care experience for patients, doctors and medical staff
